

Parley — Brand Guidelines

Purpose of this document. This is a machine-readable brand spec for building the Parley web app. Treat every value here as canonical. When generating UI, pull colors, type, spacing, and component rules from the tokens in §10 verbatim. Do not invent new colors, fonts, or accent hues.

Product: Parley — an AI voice agent that phones the market, gathers real quotes in comparable form, and negotiates the best deal on the user's behalf.

Origin: Built for *The Negotiator* challenge (ElevenLabs × Hack-Nation). First vertical: moving. Designed to generalize to any phone-priced market (medical bills, contractor bids, auto repair, freight).

1. Brand essence

Name	Parley
One-liner	The voice that haggles so you never overpay.
Tagline	Never overpay again.
Positioning	A closer in your corner — patient, precise, never intimidated. Parley turns an afternoon of phone calls into a ranked answer you can trust, with receipts.
Category	Voice-agent negotiation / price transparency
Personality	Calm confidence. Trust as the base, a closer's edge on top.

Personality axes (for tuning UI + copy):

- Trustworthy, not flashy
- Confident, not arrogant
- Plain-spoken, not jargon-y
- Precise, not vague
- Unbothered, not aggressive

2. Messaging pillars

Use these as the backbone for headlines, section copy, and feature framing.

1. **Real quotes, compared.** The same job described identically on every call. Fees itemized, ranked, and shown side by side — not a polished range that hides the differences.
2. **Honest by design.** Discloses it's an AI when asked, never invents a bid or fakes inventory. Trust is the product; voice is how it's earned on both ends of the line.
3. **Leverage, not luck.** One bid played against another, fees questioned, red flags surfaced. The price moves during the call because Parley earned it — with transcript to prove it.

Proof points (real numbers from the domain — safe to use):

- 5.6× price spread on an identical 45-mile move (\$1,158–\$6,506)
- \$20B+ market that still runs on the telephone
- Sight-unseen phone quotes are ~40% more likely to end higher than the estimate
- 16,851 small moving companies, avg 6.2 employees

3. Voice & tone

Parley literally speaks, so the app copy and the phone agent must sound identical: **prepared, plain-spoken, unbothered, honest.**

Trait	Do	Don't
Prepared	"Two-bedroom, 45 miles, third-floor walk-up."	"Umm, roughly a medium move?"
Plain-spoken	"That's \$180 above your best quote."	"Unlock synergistic savings!"
Unbothered	"No problem — what's a fair number?"	"Please just give me a price."
Honest	"Yes, I'm an AI calling for a customer."	"Trust me, another firm quoted less."

Copy rules:

- Lead with numbers, not adjectives. Dollar figures and percentages carry the message.
- Never overpromise. No "guaranteed," no hype punctuation, no exclamation stacks.
- Short sentences. Active voice. Second person ("You're not overpaying").
- Every outcome is concrete: an itemized quote, a callback commitment, or a documented decline — never "they said around two thousand."

4. Logo & mark

Concept: three sound bars stepping *down* — a voice on the line and a price coming down in the same shape.

Construction (SVG source of truth):

```
<svg width="48" height="48" viewBox="0 0 48 48">
  <rect width="48" height="48" rx="14" fill="#0B1A24"/>
  <g fill="#C6F04D">
    <rect x="12" y="14" width="5" height="22" rx="2.5"/>
    <rect x="21" y="20" width="5" height="16" rx="2.5"/>
    <rect x="30" y="25" width="5" height="11" rx="2.5"/>
  </g>
</svg>
```

Corner radius scales with the tile: $rx = height \times 0.29$.

Color pairings (only these):

- Ink tile `#0B1A24` + Signal Lime bars `#C6F04D` (primary)
- Signal Lime tile `#C6F04D` + Ink bars `#0B1A24` (on dark backgrounds)
- Outline: transparent tile, `#C6F04D` stroke + bars (minimal contexts)

Wordmark: "Parley" set in Space Grotesk 700, letter-spacing $-0.03em$. In a lockup, mark height $\approx$ wordmark cap height $\times 1.4$, gap = mark width $\times 0.28$.

Clearspace: minimum padding around the mark = 50% of the mark's width on all sides.

Minimum icon size: 16px (favicon-safe).

Never: recolor the bars, add gradients/shadows to the mark, reverse the descending direction, stretch the wordmark, or place it on a busy photo.

5. Color

One dark neutral does the work; one electric accent means "money saved, deal won, voice live." **Signal Lime is the only brand accent — use it decisively and sparingly.**

Core

Token	Hex	Role
Ink	#0B1A24	Primary. Text, headers, dark surfaces, trust.
Signal Lime	#C6F04D	The one accent. Wins, savings, live voice, primary CTAs.
Signal Deep	#A9D633	Lime for text/icons on light bg (contrast-safe).
Deep Slate	#12303F	Secondary dark surface, cards on dark, depth.
Cloud	#EDF2F3	Light app background, section fills, empty bars.
Mist	#F6F9FA	Lightest background.
Paper	#FFFFFF	Cards, primary surfaces on light.
Line	#D9E1E4	Borders, dividers.
Muted	#5B6E78	Secondary text, metadata, captions.

Functional

Token	Hex	Role
Trust Blue	#2F6BFF	Links, info, secondary action.
Flag Amber	#F5A524	Red-flag fees, warnings, "too good to be true" quotes.
Overpay Red	#E5484D	Danger, highest quote, over-market.

Usage rules:

- Signal Lime is for *action and wins only* (CTAs, best-deal markers, live-call state, savings figures). Never use it for body text or large fills.

- On light surfaces, lime text/icons must use **Signal Deep** #A9D633 for contrast; the pure #C6F04D is fine as a fill behind ink text.
- Highest/over-market quote → Overpay Red. Suspiciously-low quote (below-market red flag) → Flag Amber. Recommended/negotiated quote → Signal.
- Default app chrome is light (Mist/Paper). Ink is for heroes, nav, and the live-call widget.

6. Typography

Family	Use	Source
Space Grotesk	Display & headlines (600/700)	Google Fonts
Inter	Body & UI (400/500/600/700)	Google Fonts
JetBrains Mono	All numbers — prices, fees, timestamps, labels (400/500/700)	Google Fonts

```
<link href="https://fonts.googleapis.com/css2?family=SpaceGrotesk:wght@400;500;600;700&family=Inter:wght@400;500;600;700&family=JetBrainsMono:wght@400;500;700&display=swap" rel="stylesheet">
```

Rules:

- Headlines: Space Grotesk, letter-spacing -0.02 to -0.03em, line-height ~1.08.
- Every dollar amount, percentage, fee line, and duration renders in JetBrains Mono (tabular feel = "receipt you can trust").
- Body copy: Inter, 15–17px, line-height 1.5.

Type scale:

Level	Font / weight	Size
Display	Space Grotesk 700	40–82px
Heading	Space Grotesk 600	24–40px
Subhead	Inter 600	18–20px

Level	Font / weight	Size
Body	Inter 400	15–17px
Label / data	JetBrains Mono 500	12–14px
Eyebrow	JetBrains Mono 500, uppercase, letter-spacing 0.22em	12px

7. Motifs & iconography

Three recurring shapes carry the brand through the product:

1. **Live waveform** — animated lime bars on ink; signals an active call / listening agent.
2. **Descending quote line** — a line from highest bid (red dot) to won price (lime dot), with the percent drop in mono. The core brand gesture: value going *down*.
3. **Itemized receipt** — every fee on its own line; proof over polish.

Icon style: simple, geometric, 2–3px stroke, rounded caps, single-color. Match line weight to JetBrains Mono. No filled illustrative icons, no duotone.

8. UI direction

Surfaces: light app (Mist `#F6F9FA` / Paper `#FFFFFF`) with ink heroes, nav, and the live-call widget. Generous whitespace, calm density.

Radius: cards 18px, buttons/inputs 12px, pills 999px, mark tiles 29% of height.

Elevation: soft only — `0 8px 26px rgba(11,26,36,0.05)` for cards; heroes use a radial lime glow (`rgba(198,240,77,0.16)`) top-right, no hard shadows.

Spacing scale: 4 / 8 / 14 / 20 / 28 / 44 / 88px.

Component specs

- **Primary button:** Signal Lime fill, Ink text, 12px radius, Inter 600, padding 13×22px. Use for the single most important action per view (Start negotiating, Book).
- **Dark button:** Ink fill, white text — secondary actions (Hear the call).
- **Ghost button:** transparent, 1.5px Ink border — tertiary (View transcript).

- **Status chips (pill, JetBrains Mono 12px):**
 - Live call → lime tint bg + pulsing dot
 - Best deal → Ink bg + lime text + ★
 - Red-flag fee → amber tint bg + 🚩
 - Highest quote → red tint bg
- **Quote comparison row:** rank (mono) · name + sub-detail (why it's ranked) · relative-cost bar · price (mono, bold). Color the bar and price by role (Signal / Slate / Amber / Red).
- **Live-call widget:** ink card, mover name + call counter, animated lime waveform, mono transcript line showing extracted fields (`base $1,595 · stairs $0 · valid Fri`).
- **Savings hero metric:** large Space Grotesk 700 number in Signal Lime on ink ("You saved \$1,815"), with a one-line proof caption in muted.

App layout pattern (landing / results)

1. Ink hero — states the promise + a lime savings number as the hero metric.
2. Ranked quotes directly below — recommended pick pinned, red-flags surfaced inline.
3. Every quote links to its transcript/recording (receipts).

9. Do / Don't (fast reference for the agent)

Do: use exactly one accent (Signal Lime); put every number in mono; keep surfaces light with ink accents; surface red-flags with amber and over-market with red; lead copy with figures; keep the descending-bars mark intact.

Don't: add a second accent color or gradients on the mark; use lime for body text or large fills; use lime text on light bg without switching to Signal Deep; write hypey copy or fake urgency; hide fee differences behind a single "range."

10. Design tokens (copy-paste)

CSS custom properties

```
:root{
  /* core */
  --ink:#0B1A24;
  --signal:#C6F04D;
